

Scibots!

We chose this name because science has been our main focus this year in our inquiry group. Scibots sounds futuristic, just like we are.

Memphis Jorja Adiva Jaylah

Wow - we got to the finals of the Vector EPro8 Challenge for the first time ever. We once came 3rd in the area heats but we never dreamed we would make it this far.

In the heats and the semi finals we made drum sets that self drummed a rhythm, Uncle Albert's bed and alarm and a light and buzzer and a rope that pulled Uncle Albert out of bed. We can't imagine what we will do next but we are sure it will be fun.

We think what helped us in the heats was our ability to work together by listening to each other's ideas and considering them. No idea is stupid unless proven to be so! Engineering is the opportunity for us to problem solve and to be good at that we need to think through problems logically and creatively. One thing we learned was to stop and reconsider, even if it meant starting again. As a mostly girl team from South Auckland, we are proud to be going to Mt Roskill Intermediate finals, whatever the outcome!
